

How did I become a stem cell donor?

I heard about stem cell donation and voluntary stem cell donors, then looked it up on the OVSZ website

I went to donate blood and was confirmed that I am healthy so I could apply to be a stem cell donor in a few days

I made a statement of consent and then my blood sample was sent to the lab.

When the genetic test was completed, I entered the stem cell donor database.

While I was waiting for someone to need me and my stem cells, I kept my contacts up to date and gave blood regularly so I could save lives anyway.

When I was selected, a one-day medical examination confirmed that the donation is safe for me and the patient receiving my stem cells

Stem cell donation took 2 days.

With this action, I gave a patient a chance to recover. And then, in an anonymous letter, I wished the patient to heal and take care of my cells!

Be a stem cell donor too!
